

## Path to Positive Communities Overview

American communities are the wellspring of our national pride, security, and vitality. Local leaders can bring together major sectors of their communities, including health, business, faith and higher education, to create community-based climate solutions. In partnership with these leaders, local government can engage more deeply with their communities to garner public support for solutions. By empowering local leaders to engage citizens in personally relevant ways, we can build political will for climate change solutions on multiple levels. Our neighborhoods, streets, schools and infrastructure depend on local leaders to protect, prepare and build prosperous communities in America.

Path to Positive Communities is a council of diverse community leaders and organizations united to advance climate solutions. By joining Path to Positive Communities, you will become part of a national network that is committed to local and national solutions to climate change, furthering the work already underway by mayors and county leaders in communities across the country.

Path to Positive Communities provides you with free resources and tools that will help you make climate solutions a priority in your community. Make the Path to Positive pledge and you'll get access to:

- Talking points to help you effectively communicate on climate
- Support from a strong nationwide network of local community leaders who are also committed to making a difference through Path to Positive Communities.
- Social science and communications research to support your engagement efforts
- Effective tools and resources to help you make an impact and inspire your community members to get involved with climate solutions
- Success stories from community leaders who are making a difference in their towns, cities, regions and nation to provide you with ideas and inspiration

Let's get on the path to a positive future together. Please join us at [www.pathpositive.org](http://www.pathpositive.org).
